

Online Real Estate Portal

Vattikuti Anirudh¹, Akhil Chitreddy², Gogineni Kailash³

^{1,2,3} School of Computer Science and Engineering

Abstract: We propose to build a real estate portal that allows users to post property for sale as well as search sort property and contact its owner online. It also consists of an innovative feature that allows users to post reviews of the dealing process with a buyer after their deal. This allows the buyers to verify a sellers profile and view his past deal experiences from other user reviews on his profile. Every user on the portal has a profile that can be viewed by to check his past deals status. A user may post bad reviews about another user he has dealt with if any payment issues are encountered during the deal. So users may now verify that particular user before dealing with him. Users may look for property as per area, Bhk, Location as well as other amenities like lift, furnished, semi-furnished etc. The system sorts property and displays results list as desired by user. Users may also post a property for sale along with desired price, location and contact details. Dealers can advertise their new projects to the users with the permission of admin. New users can register with permission of admin. The product also provides also lists available loan strategies at present and directs user to the desired bank's website.

KEYWORDS: Spatial Database, Information Visualization, Real Estate Information.

Introduction:

This website is an Online real estate business website through which a user can access its information and manage all the adding, updating, deleting the assets and some of its tasks. The Admin user can change the update the information regarding property selling and buying and cancellation. The system is very useful for the companies who develop apartments, hotels, villa, residential properties and commercial properties. Companies or individual agents can also advertise their property. This website is designed to attend to all your needs – from buying property, selling property or renting/ leasing of property in India. Here you found the better opportunity to invest your value of entire life. Property Portal helps us to maintain the database of various property & agent's information.

Objective:

- To provide 24/7 service to all its users.
- To provide secure logins all the users.
- To display pictures of the property to the user.
- To let seller or dealer post pictures of their property.
- To provide a uniform look to website.
- To provide many help frames so that user can easily use this product.
- To provide a portable product, this is available to all.
- To keep track of the data using database.

Literature Survey:

In older days when we want purchase a property we can't directly communicate with the owners. We must contact with the help of mediators, but the mediators takes lot of amount and it is also time consuming process. In older days the property dealing procedure consist of many steps like finding agent, appoint correct meeting time, location and so on. Up till now there was no Security in Online Real Estate System, Registration form improves the security by limiting user.

The existing sites are:

1. www.99acres.com: The site can be navigated by anybody. No issue of Security is implemented.
2. www.indiaproperty.com: It was launched in 2006.

These websites provide features like search property, add property and gives different offer which will be beneficial to user. But even with these features there are certain required aspects which make these sites limited. They are: 1. No search gives correct information about basic services available from chosen location like displaying the distance of nearest bus stop, railway station, hospital etc. 2. No flexibility in information retrieval for e.g. listing houses that is within the 2Km radius of allocation.

SYSTEM ARCHITECTURE:

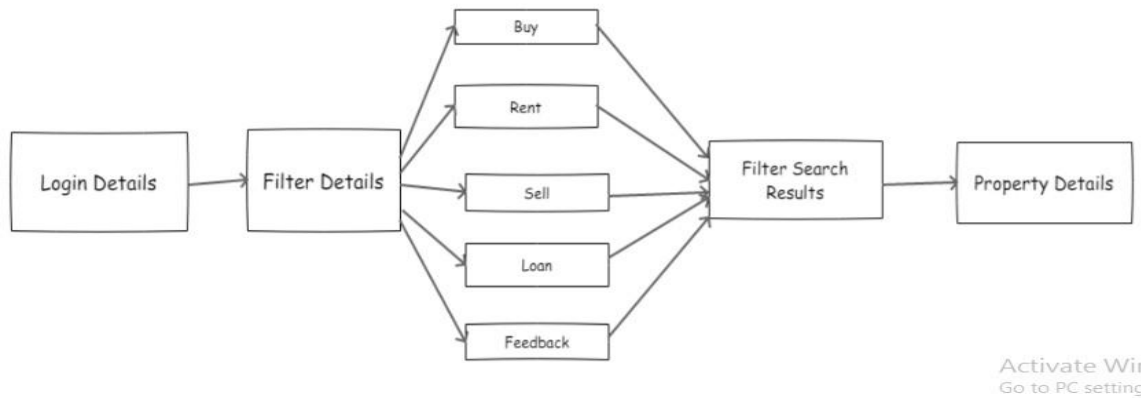

Figure 1: Architecture Diagram

DESIGN PROCEDURE:

Figure 2: Design Procedure

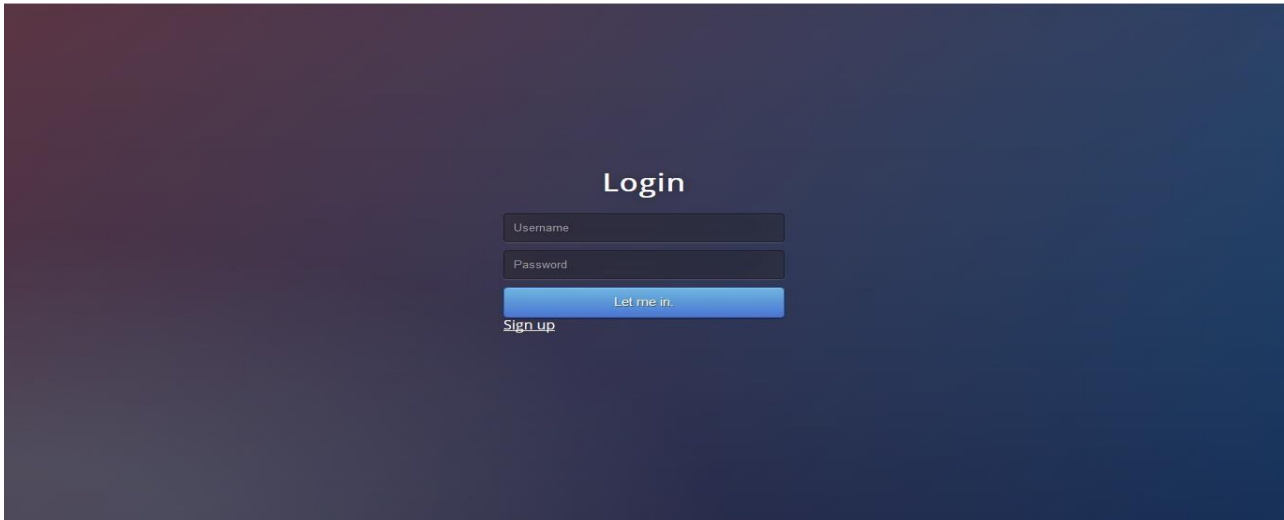

Proposed System:

Our proposed system gives all the features provided by the traditional existing systems, but instead of working only with non-spatial database, the system also works with spatial data. The system will have the following prominent features: -

Specification based searching This feature provides the related information to the users according to the specification they have provided to the website. For e.g., if a user is looking for a house with 1bhk at 9 lakhs at Thane, then only those properties which satisfy the aforementioned demand will be returned to the user. Agent Notification Once the user is focused in a particular property and clicks the "Confirm" button a mail type message would automatically be sent to the agent who manages the corresponding zone, informing agent about the user's name, his contact number and email address. Adding property for sale A user can add his property that he is willing to sale so that it can be viewed by other potential clients focused in similar property. For this purpose, the client is supposed to enter not only the location but also pictures and the cost at which he is willing to sale that property. Notifying interested users Whenever a new stuff is added, then a mail type notification is automatically sent to all those clients who were interested or were searching for a near property. Thereby notifying those users about the availability of that property. Allowing users to contact the retailer. The loan is an added database advantage to the users. The users would be given the feature of borrowing a loan from the retailer before making a final decision. This would help the user to disparte interesting property finds and thus help in final decision making.

Providing user with the different areas in which properties are available for sale, the user can easily select the desired property. The official documentation is an additional feature which helps us to clarify our doubts about the property and make sure that the property is certified by the government which gives us a clear amount of the property without fraud.

ABOUT DWARKA REAL ESTATE

Mob. 09899320481, 08826303700

Hot Properties For Sell

DWARKA REAL ESTATE is dwarka's first professional property service and real estate broking business company. It is based on a philosophy of service to its customers offered with PROFESSIONALISM, INTEGRITY, TRANSPARENCY and TRUST. In a market that is currently dominated by the unorganized sector, largely unregulated and represented by Sole Proprietorship firms managed by unaccountable and often inscrutable property agents, Property promises to reinvent the business of property broking in dwarka/delhi ncr.

Clients can count on DWARKA REAL ESTATE for all property related requirements, whether small or big with an assurance to be served with the same level of enthusiasm. As a real estate company, DWARKA REAL ESTATE property caters to all the needs and requirements of its clients under a single roof - be it sale, purchase or lease of their property, investment in properties, property advice, property management and few more value added services

DWARKA REAL ESTATE maintains confidentiality about its buyers & sellers and concludes the deals at the best prevailing market prices. With the help of its vast pool of database "DWARKA REAL ESTATE Magic", DWARKA REAL ESTATE is successfully catering to the requirements of its clients for both commercial and residential projects. Based on high ethics, professional services and transparent dealings DWARKA REAL ESTATE has created an indispensable space for itself and is reinventing the landscape for property brokerage business in dwarka/delhi ncr.

Pseudo code:

- Enter the login credentials
- Choose the desired options and the properties according to the options selected will be displayed.
- Select the property if it matches your requirements and fill the form for beside for receiving the response.
- Select the official documentation for viewing the certificate issued by the government.
- If the user is in lack of money then he can select the loan option and apply for loan.
- If the property does not match the requirements of the user then he can check other properties available for rent or sale.
- Press the logout option if the user wants to end the session.

ADDITIONAL FEATURES:

Loan Option: The loan option provides the user to apply loan instantly by filling the document and sending to the retailer and the user can purchase his desired property hassle free.

Official documentation: It is included for giving clarity to the users about property location, price, bedrooms etc which is officially verified by the government.

METHOD METHODOLOGIES:

The initial aim of this study is to compare information about several features of a house e.g. number of bedrooms, cost, location, type of property and display the properties list according to the search. Then the additional modules are added such as feedback, list all property, rent all property, buy all property etc. After the user searches properties several times, the website shows recommended properties which are for sale. The user can buy the property by contacting the retailer through filling the section of user's details which gets stored in the database and the retailers contact the users who have entered their details. The implementation is done using PHP, HTML, CSS, JAVASCRIPT, MySQL database and Xampp version 3.2.2 is used to support the SQL commands. The additional features include the loan option and the official documentation which is not present in the existing system. The loan option provides the user to apply loan instantly by filling the document and sending to the retailer and the user can purchase his desired property hassle free and official documentation is included for giving clarity to the users about property location, price, bedrooms etc which is officially verified by the government. So, our project aims not only to implement future scope but also a feature which we wanted to include.

Conclusion:

The website is to bring the real estate industry online and enabling real estate industry participants to benefit from the Internet. Site acts as an interface between Individuals, brokers and realtors. Here the user can advertise his property for buying or for selling.

Loan option brings this website into the light as it allows the user apply loan online and does not have to worry about financial problems. Another feature is the official documentation which is used as means to certify the property is verified by the government.

Acknowledgement:

We would like to extend our gratitude to our faculty, Prof. Jabanjalin Hilda for helping us and guiding us in its execution.
