**Abstract:** In today's era, every person run to gather the information by searching it online and by collecting the stats from the particular website. So, we started to do the research on the various projects and finally after searching so much we came to the mutual agreement of making this project. The website has lot of complaints and lots of flaws that are to be removed from this website like the responsiveness and other particulars of the website. To solve this problem, MoDoNER is being developed by having lots of research and documentation and we have the honor to make this type of renowned and governmental projects and in order to serve the whole nation and also to dig deep into the most unaware region of the India. As it is also the most important region of the country and these region also contribute to the nation a lot and also having these north east region states makes the whole Nation India proud.

**Key Words:** North East Region, 7 Sisters, North East

## 1. INTRODUCTION

### 1.1 Background

Initially, we are presented with web portal which provide only the basic needs of the project by providing all the necessary information which are given in different format such as some of those are in printed pdf and some are in the form of the dashboard given or opened to the next tab operation which provide us the complete information. As it come to some other platform such as mobiles and tablet it seems like more distorted and content available on it are in the distorted format also some of the links that are to be activated by the time are given and empty statement. The problem of having distorted screens doesn't attract the user to seek into the website and in order to browse into the website and to seek the general people's awareness.

### 1.2 Aim & Objective

The project aim is to develop such a web portal which allow interaction of the multiple people with the newly designed interface which make it more attractive for the user to go through the whole website. As it is redeveloped and redesigned website so we have made it a single page website in order to make this site really impressive and

less complex although keeping all the content that is to be mentioned. It also provides the advantage of having a static page website reducing the complexity attracts the user as even an unknown user can easily access the website and can handle it easily.

## 2. LITERATURE SURVEY

### 2.1 Related Work

This portal provides information regarding the various initiative and schemes and all the information about the states in this region. The website is to be built purposely in order to manage the website in the different platforms as the user want it to be also using the latest technologies and different languages and various new schemes the whole thing has been organized in such a way that there is ease of the user. Also different navbars and different portion of the whole website has been used in a successful manner in order to make a perfect static page website and also easily understood by the user on the operation.

This website runs on the local server created for its better performance and in order to maintain the whole website as the complete ones. Also the website have some amazing facts added for making the user bound to the website in order to make this website more useful in order to make the work more clear and clean so that all the flaws are removed from the particular website..

### 2.2 Problem Statement

So talking about the problem in the previous version of the website the previous version of the website wasn't responsive on running it on the different platforms and also the things like site map wasn't working properly also due to no responsiveness in the website the user don't want to go through the website. Bullet/Notice board containing recent news updates are also missing in the website. All links to the social media websites are not provided in the website. Navigation bar for easy navigation to all the pages within the website is also the major issue in the current version of the website.

### 3. PROPOSED SYSTEM

The project “MoDoNER (Ministry of Development of North East Region)” is website based project made by having the mixture of different new technologies in order to make it more attractive and also to make it that much responsive so that every user can go through the whole website also removing all the flaws in the particular and new version of the website besides removing all the flaws from the website adding up the newest features in the website. Also this website can run on all the different platforms and all the operating system without any distortion making it a fully operational website without having flaws in the website.

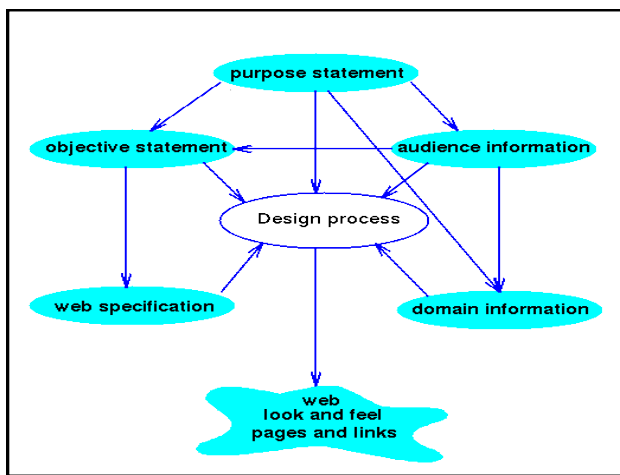

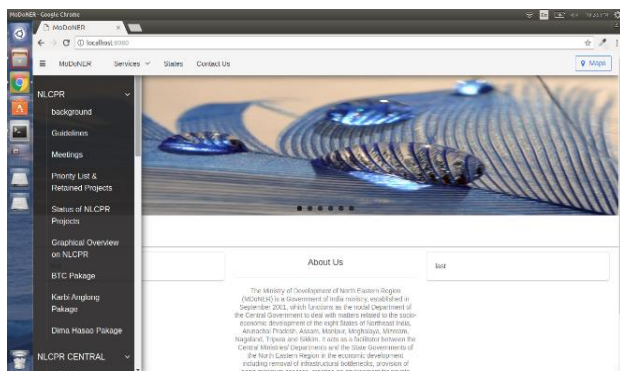

Fig 1. This figure shows the designing process of the whole website.

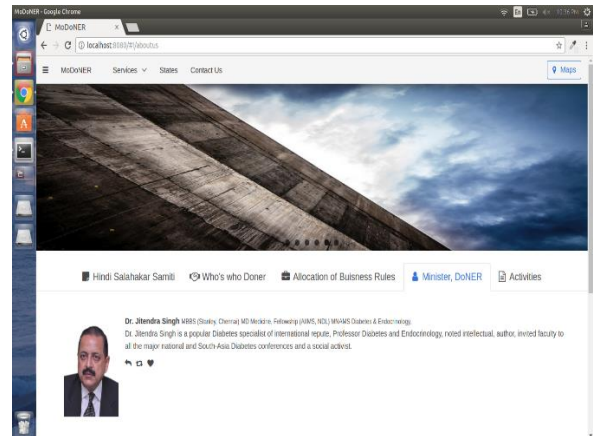

### 4. MODULE IMPLEMENTATIONS

#### 4.1 Dashboard

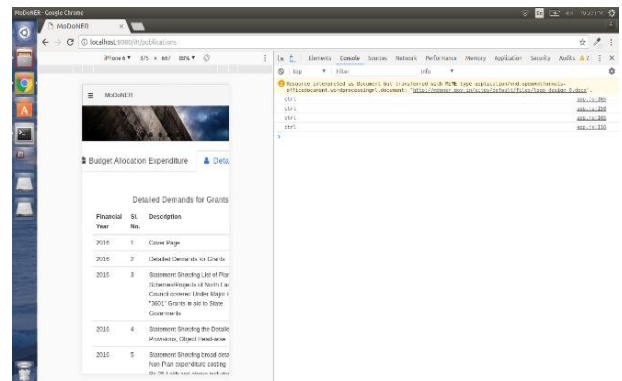

This is the front page of the static page website. It denotes the slide bar and also shows the functioning of the dashboard

### 5.2 Schema page

This web screen displays all the information about the different ministries and all the initiatives taken by the ministry of development of north east region.

The details of the initiatives and all the schemes are being displayed on the screen in order to make it an eye catchy website

Above figure showcases the proper responsiveness of the whole website and all the details. Each and every thing is adjusted according to the module and according to the operation system or we can say that according to the platform that we are running the website.

### 6. CONCLUSION

There were many problems regarding the current version of the website such as the website is not responsive also there are many features missing throughout the website such as the photo gallery the site map also the major concern of this website is that the responsiveness that is actually missing in the website also this site have some features not working in the website we need to build up the particular features to improve the website.

Bullet/Notice board containing recent news updates are also missing in the website. All links to the social media websites are not provided in the website. Navigation bar for easy navigation to all the pages within the website is also the major issue in the current version of the website.

We have all the features in this websites which are missing in the previous version of the website also improving the responsiveness of this particular website also adding some more beautiful features to it which makes the design of the project being attractive and also increases the features of this website as the work proposed by us in the current version of the website. Not only responsiveness is the main aspect of this website also there are many things which we find missing in the website. The complete design has been modified by us as we certainly try to improve the website by making it more resolved for a first time user and anyone can easily use the website. The features of the whole website including the maps site map photo gallery all are in the detailed structure and each page is resolved very much as there is no complexity in our version of the website.
